TMD treatment as local dentist who majored in oral and maxillofacial surgery
Yeom, Hak-Yeol
Seoul E-jaw dental clinic

After training, you will be in OMFS clinic or open the general dental clinic.

When you open the private clinic, you will do all the treatments such as preservation, prosthesis, implant treatment, etc. you also see patients with jaw joint disease, which you have not often encountered during training.

I would like to talk about the concept of the temporomandibular joint which should be known as an oral surgeon and the treatment that can be done at the local clinic. In particular, I will briefly discuss muscle pain and arthralgia, referred pains, trigger point injection, TMJ arthrocentesis, splint and insurance.
