Maxillofacial Aesthetic Surgery

V Ilankovan

Maxillofacial/Head and Neck Unit, Pool Hospital NHS Foundation Trust, United Kingdom

The face is the window of the world. Face is affected by congenital and acquired diseases, trauma and malignancy. Ageing also affects facial proportion and contour.

Bone surgery can achieve proportion, however, voluminisation and contour restoration needs another concept in management.

We have introduced the concept of bringing aesthetics in this correction of congenital, acquired facial deformities as well as correcting the deformities as a result of ageing .

Ethnicity , culture , age and expectations dictate what Surgeons can provide.

socioeconomic limitations also plays a role in the decision making process. We will bring in the concept of Aesthetics into Orofacial Deformity correction, Facial rejuvenation and Ageing.
